TLDR: STEP*
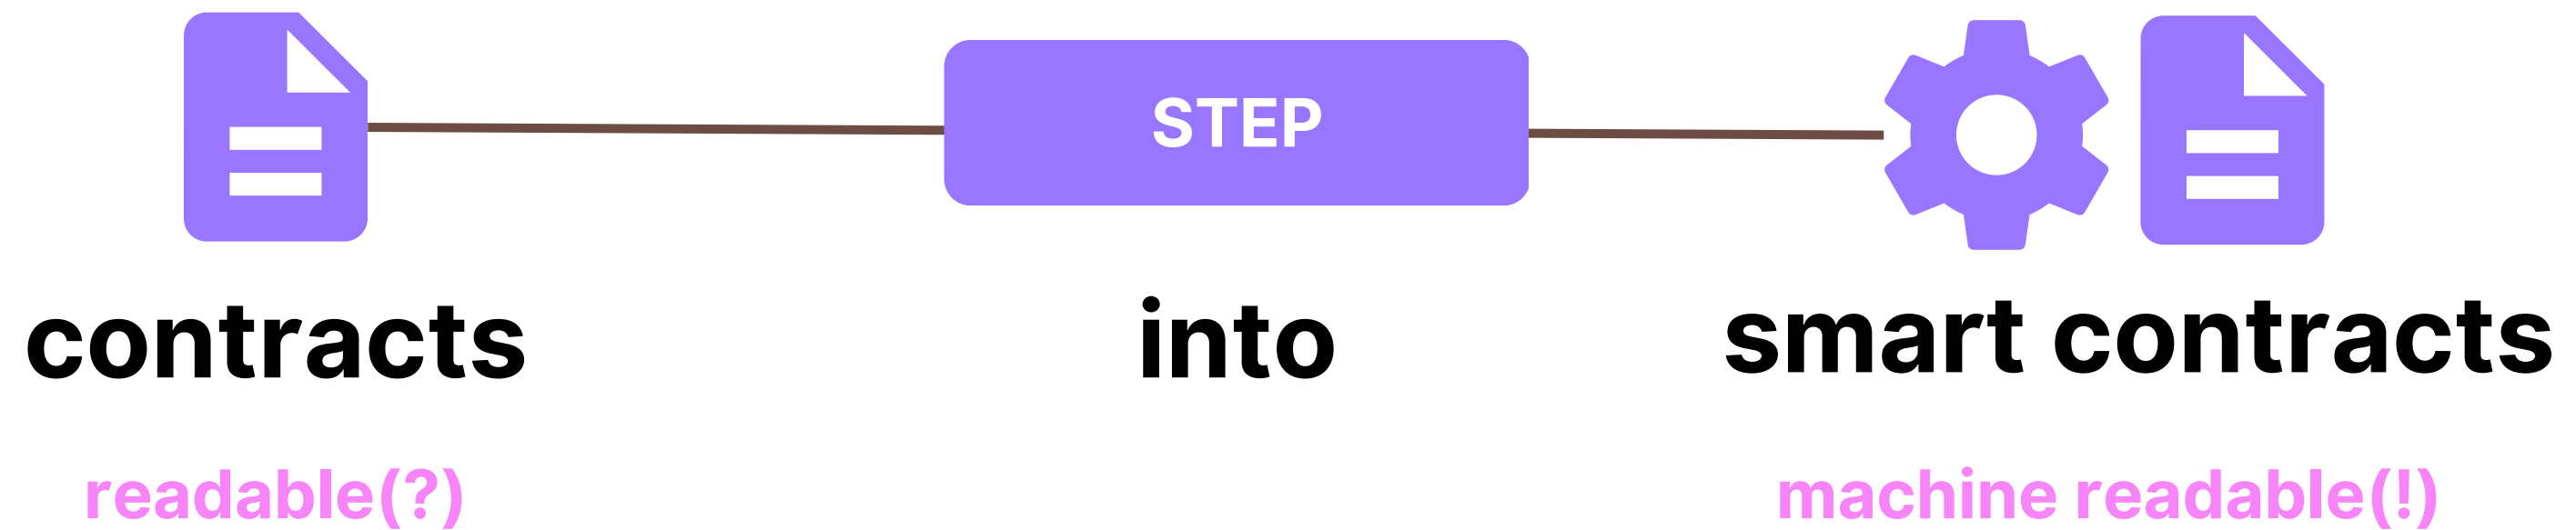

*Simple Temporal Exchange Protocol

STEP converts

contracts
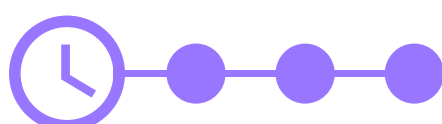

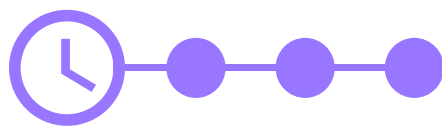

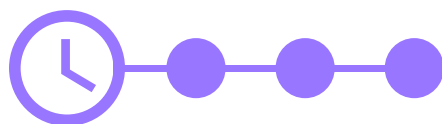

readable(?)

STEP

into

smart contracts

machine readable(!)

How it works:

Register asset*   **Tokenize timeline**   **Define terms**

*Assets = DID's (read more here)

You can **combine** them too.

STEP(Rental) — P2P Avis

STEP(Rental) — P2P Uber — STEP(Labor)

STEP(Labor) — P2P UpWork
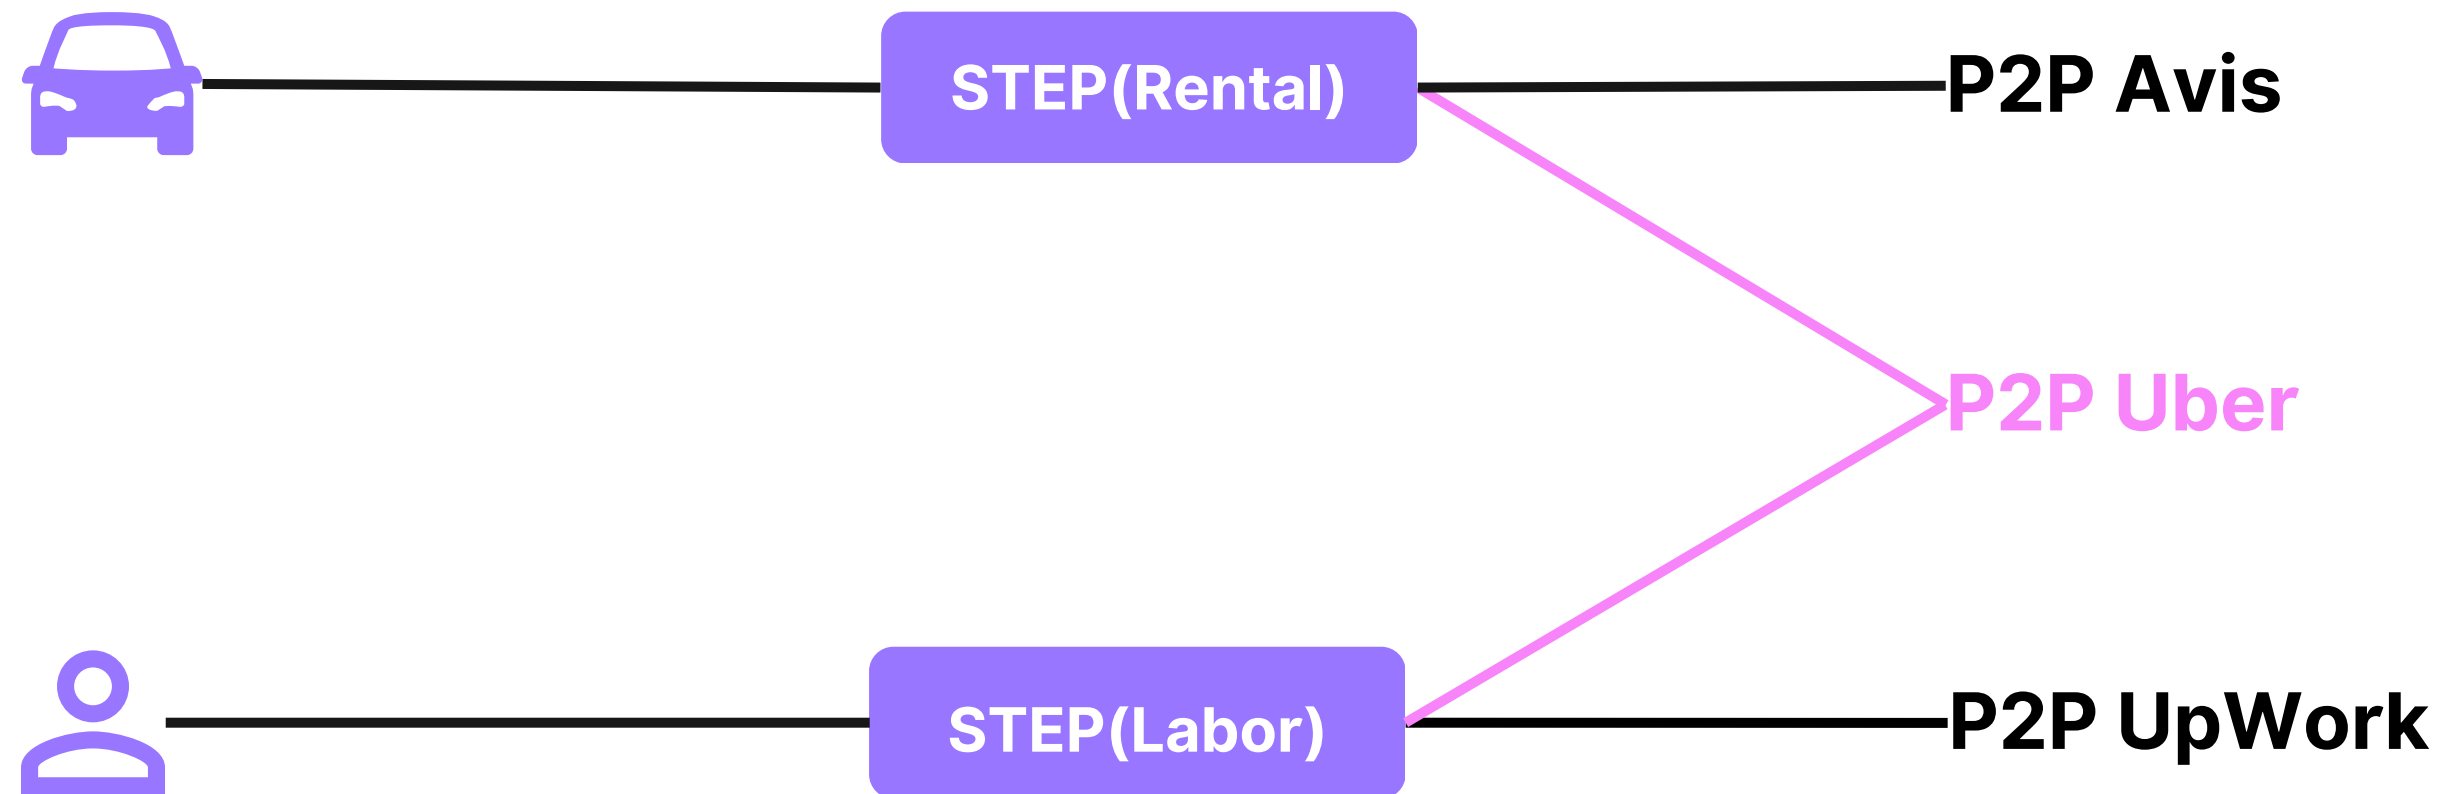

That's it.
